EDITORIAL COMMENT

It is a great pleasure for the faculty to present Volume 8 Number 2 edition of the *Journal of Educational Innovation and Practice (JEIP)* which focuses on the important role of education in Nigeria's socio-economic development and political restructuring in the 21st century. The journal explores how education can help make progress amidst Nigeria's complex challenges. It delves into various aspects of this relationship, such as educational policy and reform, skills development for employment, youth empowerment and civic engagement, gender equality, inclusive education, and education's role in conflict resolution. This issue aims to contribute to the formulation of effective policies and initiatives aimed at fostering sustainable development and stability in Nigeria.

Dr. A.O. Akinbobola

Editor-in-Chief / Dean of the Faculty of Education

AUTHORS GUIDELINES

Introduction

This guide, issued by the Journal of Educational Innovation and Practice, aims to assist authors, peer reviewers, editors, and members of the journal in following unified standard guidelines and writing style for all published articles and to raise the publishing quality by facilitating and accelerating the review process. **SEE JEIP ARTICLE TEMPLATE.**

Before submitting your article, please ensure that it is prepared following the Author Guidelines below. If you have any queries about how to prepare your article for submission, please contact omotundect@aceondo.edu.ng

Author definition

An author is whoever name is mentioned on the submitted article for publishing and meets the following three conditions:

- He/she must have contributed to the conception and design of the study or the acquisition, analysis, and interpretation of data.
- Drafted the research paper or critically revised it
- Gave final approval to the research paper's version submitted for publication.

A person should not be listed as an author if he/she does not fulfil the above-mentioned criteria. The acquisition of funding, collection of data, or supervision of the research group are not enough to justify authorship alone, however, such contributions shall be listed in the acknowledgments section. Research papers submitted by two or more authors to the journal must obtain the consent of all participating authors in the research.

Submission of Research Papers

Research papers and studies must be submitted to the Journal of Educational Innovation and Practice's Editorial Board through the journal's platform link or omotundect@aceondo.edu.ng

Authors are expected to ensure that they follow the journal's writing guidelines and conditions before submitting their research paper to the journal, otherwise, the journal shall return the submission for further amendments and compliance before evaluation.

Required documents

Authors must ensure that the following files are uploaded upon submission through the journal platform:

- Title page and author(s) information
- Abstract
- An anonymized file of the research paper (delete any information that reveals the identity of the author)
- A completed and signed Author Declaration form
- Checklist for compliance with publishing conditions and guide

Publishing standards

The journal accepts research studies provided that the following conditions are met:

- The research must be in line with the aim and research scope of the journal.
- The research must be original and should not be previously published or submitted for publishing elsewhere, neither partially nor in full. Accordingly, the author(s) must submit a written acknowledgment of that along the submission.
- The research should be novel, and should have a clear contribution to its field.
- The author/s shall abide by the intellectual property law, scientific integrity as well as research methods and ethics principles mentioned on the journal's website.
- The author undertakes to perform the required amendments provided by peer reviewers, in line with the journal's peer review process mentioned on the website.
- The journal may accept the publishing of a research paper built or extracted from a scientific thesis (Master's or PhD), at the condition that that it is restructured, edited, and updated. In this case, this must be disclosed in the author's declaration form, and referred to in the first footnote (linked to the title) of the research paper. Purely identical research copied from a master's or doctoral theses is not accepted.
- The research paper words count should range between a minimum of 6000 words and a maximum of 9000 words, including figures, illustrations, tables, appendices, and references.
- All research submissions are screened through Turnitin plagiarism software.
- The research shall be based on recent data and scholarly resources that foster the specialization's research developments.

Research Structure

The following research structure shall be followed:

Title page and author(s) information:

- Full title of the research paper (twelve words or below)
- Principal author's full name
- Author's specialization and affiliation
- Email address

The names of co-authors should be arranged sequentially according to the research contribution and efforts and in line with international scholarly publishing ethics.

Abstract:

- The abstract should not exceed 250 words.
- The abstract briefly discusses the research problem, objectives, and importance of the study. It then briefly explains the research methods, tools and methodologies, and most importantly analysis and statistics. Finally, it gives a glimpse of the most important conclusions, recommendations or scientific value.

Keywords: Should be between 3-6 keywords separated by a comma

Research body:

The research paper starts with an introduction that sets the stage for the research topic being discussed. The author then poses research questions and formulates research hypotheses. The theoretical framework, literature review, and previous studies that relate to the research constructs and questions are discussed. The research methodology is presented, including the study population, target sample, sampling method, data collection tools and procedures, and statistical methods and tools used for data analysis. The results of the study are then analyzed and discussed in relation to the hypotheses and research questions. Finally, the paper concludes with a summary of the study's findings, recommendations, and proposed future studies. The research paper should be between 6000 – 9000 words, excluding the title page, abstract and keywords, but including all in-text references and the reference list.

- **Introduction:**

The introduction of a manuscript should comprise a clear statement of the subject matter, its relevance, and the purposes of the study, along with a background of the research and the overall organization of the paper.

- **Literature Review:**

Include a comprehensive literature review with explicit international connections for relevant concepts. Discuss the findings of published papers in the related area and emphasize your contribution.

- **Methodology/Methods:**

When writing, it is important to provide enough detail for readers to understand how you conducted your research. Clearly state the type of research you conducted and include a source citation to give it validity. Make sure your research questions are unambiguous and easy to understand. Provide clear descriptions of your participants along with the strategies used to collect and analyze data. Ensure to mention any approval from ethics committees.

- **Findings/Results:**

The findings of a research study should be directly related to the research questions or hypothesis. It is important to use appropriate terminology when discussing the findings or results. Tables or figures may be used to enhance the presentation of the findings, but they should be used sparingly and should not repeat information already explained in the text. It is crucial to present the findings or results in an unbiased manner.

- **Discussion:**

This section is intended to discuss the significance of the findings. It may be appropriate to combine the results and discussion into a single section. By referring back to the relevant literature introduced in the beginning, you can demonstrate how your work relates to or challenges existing publications.

It is important to note that, unless the manuscript is an opinion piece, authors should avoid attempting to persuade readers of anything. Instead, the discussion should present

what has been discovered, observed, or learned. The use of opinionated language and intensifiers should be avoided. The reader should be able to determine the value of the information based on the quality of the study and writing.

▪ **Conclusion:**

The study's conclusion should include the main findings, implications, and limitations.

▪ **Recommendations:**

Provide suggestions based on the research findings. The recommendations may include alterations in the research methodology, suggestions for future research in the same area, implementation of specific practices, or policy changes. There should be a justification for each recommendation.

Approved style guide

All references (both in-text citations and the reference list) must follow the APA Seventh Edition referencing style. The reference list should be arranged first alphabetically and then sorted chronologically. This can be viewed on <https://apastyle.apa.org>

The author should set a bibliography of sources and references at the end of the research paper, and arrange it in alphabetical order by the author's family name.

Submission Format

- Authors should ensure that their research paper adheres to the following guidelines:
- The research should be written correctly with proper use of the language and grammatical structure, and correct spelling and punctuation.
- Citations and references should be recent
- The research paper should be formatted in an editable Word format document, where Times New Roman font size 11 is used, justified, and 1.15-spaced
- Use bold font style for main headlines and sub-headlines
- Use font size 11 points for the tables' titles and content as well as for the illustrations.
- Use of bold should be limited in the text and may only be used for scientific indication.
- The page numbers should appear in the right corner of the bottom of the research pages.

Illustrations, figures, and tables

The numbering of all illustrations, tables, and figures should be consecutive (for example: Table No. 1, Figure No. 1). In the case of multiple numbering divisions, each division should be classified (for example Figure 1 (A), Figure 1 (B)). Each illustration, figure, or table should be provided as a separate file named and numbered according to the research and in high resolution that is suitable for design.

Note: The author must obtain permission from the copyright holder to reproduce figures in the journal published elsewhere. Failure to provide this permission can result in images not being included.
